Downstream Analysis

In order for the kallisto results to be read from hdf5 files, we had to install the `rhdf5` package. We used `BiocManager::install("rhdf5")` to install it.

```
library(tximport)

folders <- dir(pattern="SRR21568*")
samples <- sub("_quant", "", folders)
files <- file.path( folders, "abundance.h5" )
names(files) <- samples
txi.kallisto <- tximport(files, type = "kallisto", txOut = TRUE)

estimating size factors

using 'avgTxLength' from assays(dds), correcting for library size

estimating dispersions

gene-wise dispersion estimates

mean-dispersion relationship

-- note: fitType='parametric', but the dispersion trend was not well captured by the function: $y = a/x + b$, and a local regression fit was automatically substituted. specify fitType='local' or 'mean' to avoid this message next time.

final dispersion estimates
